

Can family influence help firms grow bigger?

Exploring the impact of family power on business expansion

In a rapidly globalizing market, size often dictates a firm's ability to compete and innovate. For family businesses, which make up a substantial portion of small enterprises, the shift from a small to a large firm presents unique challenges and opportunities. Family influence within these businesses, a factor both lauded and criticized, can be a powerful asset or a hindrance. This study explores whether family power in Italian manufacturing firms drives or restricts growth as they attempt to transition to larger business scales.

WHAT WE STUDIED

The study draws on data from 89 top-performing Italian manufacturing family firms, tracked over ten years. Using agency and stewardship theories, researchers analyzed the effects of family ownership levels, board involvement, and the presence of a family CEO on firms' growth. The research design incorporated survival analysis, using a Cox regression model to pinpoint the impact of family power on growth outcomes.

KEY INSIGHTS

1. The Sweet Spot in Ownership

The research revealed an inverted U-shaped relationship between family ownership levels and growth, suggesting that moderate family involvement best supports a firm's transition to a larger size. Excessive family ownership can introduce issues like limited managerial diversity and resistance to external capital, which can stifle growth.

2. Family CEOs as Growth Drivers

Family firms led by family CEOs had a higher likelihood of achieving size transition. The stewardship theory suggests that family CEOs often prioritize long-term firm health over short-term gains, which supports sustained growth.

3. Board Influence: A Double-Edged Sword

High family involvement on the board was found to hinder growth, likely due to potential agency conflicts and nepotism. Family directors may prioritize family over firm goals, creating friction that limits external input and innovation.

TAKEAWAYS

1. Optimize Family Ownership Levels

Family businesses should aim for a balanced ownership structure that allows family control while fostering growth. Aiming for moderate levels of family ownership could help these firms benefit from both stewardship advantages and external inputs.

2. Balance Board Composition

For boards, incorporating non-family members can mitigate agency conflicts and bring fresh perspectives, helping firms transition more smoothly. This can also alleviate concerns around nepotism and enhance board efficiency.

3. Support Family-Driven Leadership

Family CEOs, with their long-term focus, can be assets in navigating growth. By aligning family values with growth goals, family CEOs can foster stability and encourage firm-wide commitment to strategic expansion.

IMPACT

This study's findings underscore the complex dynamics family involvement brings to firm growth. As more family-owned businesses seek global competitiveness, understanding how family roles shape growth becomes critical. Future research could benefit from exploring these dynamics in different cultural contexts and industries.

RECOMMENDATIONS

To optimize growth potential while maintaining family control, firms should consider balanced family ownership and carefully design governance structures

that support external insights while preserving family influence. Furthermore, family CEOs should receive support and strategic development opportunities to foster stewardship-driven growth.
